The Maker Event Playbook

How to use it, contribute to it, and make your own

Speakers

Andrew Rudolph

Board Member, The Maker Effect Foundation

Candy Cole

Executive Director, The Maker Effect Foundation

The Maker Effect Foundation is a non-profit that runs a makerspace, performs educational outreach, produces Maker Faire Orlando, and supports local robotics teams.

Ian Cole

Board Member, Nation of Makers

Board Member, The Maker Effect Foundation

Pete Prodoehl

Maker, RasterWeb!

I like to make things, help people, and help people make things.

Dan Schneiderman

Co-Chair, Maker Faire Rochester

Dan is a maker, event producer, educator, community organizer, and has been the lead behind multiple community builds, including last year's NOMCON Community Build.

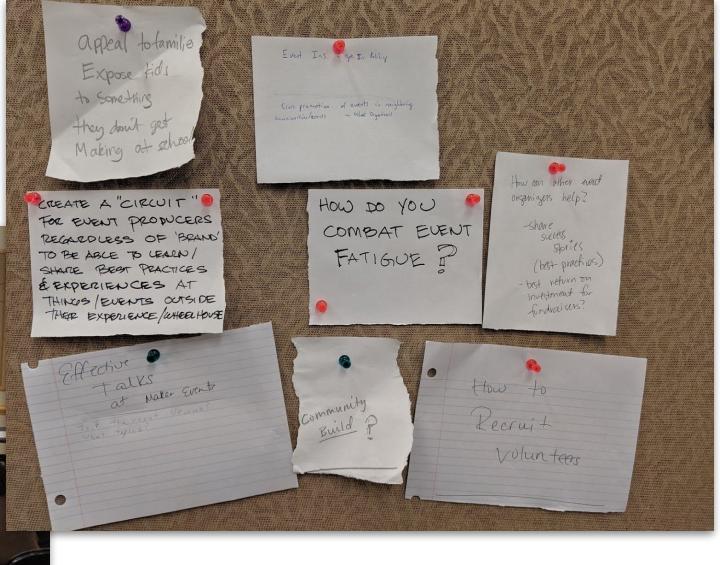

One Year Ago - NOMCON 2019

Convening of Maker Event Organizers

Would love to see a repository of shared documentation of event best practices (how to reach out to sponsors, finding a venue, organizing volunteers, etc.)

Handbook (How to)
Wiki page

- What not to do
- Type of vendors
- Trash
- movers
- Insurance rules

Challenge Accepted!

- A number of us started to discuss the concept which lead to lots of questions such as:
 - How do we make the documentation inclusive of all types and sizes of maker events?
 - How do we allow contributions from a wide number of contributors?
 - How do we make it easy for others to document their events?
 - How is the content shared with others?
 - Who maintains and safeguards the content?
- We wanted to get started, but one big question loomed - what platform would we use?
 - Google Docs?
 - Wiki?
 - WordPress?
- During the platform discussion we had an epiphany
 - Community documentation is a form of Open Source software
 - The principles and tools used for Open Source software can be leveraged to create the Maker Event Playbook!

Principles of the Open Source Way

Transparency. Whether we're developing software or solving a business problem, we all have access to the information and materials necessary for doing our best work. And when these materials are accessible, we can build upon each other's ideas and discoveries. We can make more effective decisions and understand how decisions affect us.

Collaboration. When we're free to participate, we can enhance each other's work in unanticipated ways. When we can modify what others have shared, we unlock new possibilities. By initiating new projects together, we can solve problems that no one can solve alone. And when we implement open standards, we enable others to contribute in the future.

Release early and often. Rapid prototypes can lead to rapid discoveries. An iterative approach leads to better solutions faster. When you're free to experiment, you can look at problems in new ways and seek answers in new places. You can learn by doing.

Meritocracy. Good ideas can come from anywhere, and the best ideas should win. Only by including diverse perspectives in our conversations can we be certain we've identified the best ideas, and decision-makers continually seek those perspectives. We may not operate by consensus, but successful work determines which projects gather support and effort from the community.

Community. Communities form when different people unite around a common purpose. Shared values guide decision making, and community goals supersede individual interests and agendas.

Open Source Tools

GitHub and GitHub Pages

GitHub provides version control for software projects, supports contributions by a large number of contributors, and has a built-in way of writing and sharing documentation

The Maker Event Playbook is hosted in a GitHub repository or “repo” and is automatically published as a website using GitHub pages

GitHub Features

- Open code repository with version control
- GitHub Pages
- Tracking of issues
- Review of contributions
- Notifications of changes, comments & more
- Forking
- Scalability
- A LOT more!

From Theory to Reality

The Maker Effect Foundation took on the Maker Event Playbook as a project in partnership with Nation of Makers, and with support from Google, as part of their ongoing support of the maker community

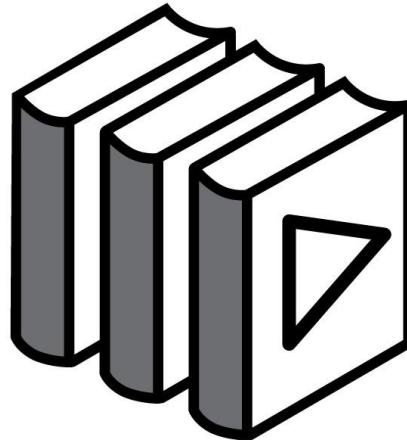

The Maker Event Playbook will be run as a long-term project of Nation of Makers staffed by the Nation of Makers community of event organizers

Project Scope

- An open-source platform for creating, updating and hosting of the playbook
- High-level maker event content that applies to many types of events (e.g. signage, ticketing, etc.)
- Creation of a process for community contribution
- Creation of documentation for local event organizers to create their own local version of the playbook
 - Document Maker Faire Orlando to lead-by-example

Open Source Maker Event Playbook

A Playbook for Maker Event Organizers

The Maker Event Playbook is a community-driven playbook that documents a wide range of maker events and the topics that are relevant to maker event organizer. Whether you host small workshops in a makerspace or produce a large multi-day maker event such as a Maker Faire, this playbook is a place for you to find helpful information and to share the what you've learned with others.

The Maker Event Playbook is a project of [Nation of Makers](#), and will be maintained long-term by the Nation of Makers community. The project's initiation can be traced back to the maker event organizer track at [NOMCON 2019](#) (the Nation of Makers annual conference) with a workshop that led to several calls to action from the attendees, one of which was to create a community-driven playbook for maker events. This led to a proof of concept with GitHub Pages in the summer of 2019, and the creation of a [project team](#) in the fall of 2019 and the goal of launching the early draft of the playbook and opening up the playbook for contributors at NOMCON2020.

Content

The screenshot shows a web browser window for 'Signage | Maker Event Playbook'. The URL is makereventplaybook.org/general/signage. The page title is 'Signage'.

The left sidebar has a 'Table of Contents' with the following sections:

- Overview
- Social Events
- Makers Hosting Making
- Events
- Makers Going Into Community
- General Event Topics** (selected)
- General Event Topics Overview
- Budgets
- Code of Conduct
- Event Documentation
- Event Technology
- Insurance
- Licensing
- Locations
- Marketing
- Participating Entities
- Photo/Video Release
- Safety / Security
- Setup Time / Strike Time
- Signage** (selected)
- Sponsorship
- Tickets
- Radios
- Unexpected Issues
- Volunteers
- 21+ Events
- Going Virtual
- Event Listings
- Issues that Will Come Up

The main content area starts with a **Summary** section:

Summary: Signage serves two primary purposes, directs people to your event (in the form of outdoor, sometimes off-site signage) and directs people around your event (in the form of on-site signage.) Signage to your event may include billboards, yard signs, and banners. Typically you'll need to work with the venue in regards to signage. Some venues have strict policies about what can be placed where, and may even need to approve artwork and verbiage.

Below the summary is a **Table of Contents** sidebar:

- Types of Signage
 - Exterior Signage
 - Interior Signage
 - Digital Signage
 - TVs
 - Projectors
- Materials
- Reusable versus Single-Use
- Design
- Limitations
- Examples

At the bottom of the sidebar is an 'Edit me' button.

The main content area then has a section titled **Types of Signage**, specifically **Exterior Signage**.

Text in the 'Exterior Signage' section:

One of the primary roles of exterior signage should be to get people into your event. This may involve telling people what building you are in, or where to park, or just where to enter the building. These may seem like simple things, but if you've got thousands of people coming to your event, even if the majority can easily figure it out, there's still a percentage that will appreciate extra guidance in getting there.

Text below the 'Exterior Signage' section:

Signage is also very valuable for makers, who often come from out of town. If you're driving an hour or more to get to an event to show off the awesome things you make, the last thing you want to do when you arrive is circle the block trying to figure out where to go, where to load in, where to park, etc. Hopefully this information has been sent to makers ahead of time, but from experience, we can tell you that signage will still help those makers who show up and seem to have no idea where to go.

Exterior signage can also serve as marketing. People unfamiliar with your event might see a sign and want to learn more, they

The Table of Contents is automatically generated from the titles used in the document!

Navigation highlights the current page to show related topics

Link to this page in the GitHub repo

Tech Note

Content pages are written in "[Markdown](#)" which is text with very simple formatting for titles, bullets, images and links. We've also created [a way to create playbook content in Google Docs](#) for those that don't want to learn the syntax.

Responsive Design

The playbook theme automatically scales for mobile devices and is easy to read on-the-go, which means that your team can use it as a reference anytime / anywhere!

The screenshot shows a mobile device displaying the 'Maker Event Playbook' app. At the top is a blue header bar with the title 'Maker Event Playbook' and a three-line menu icon. Below the header is a vertical navigation menu with the following items: 'Overview' (highlighted in blue), 'Get started' (highlighted in grey), 'Collaborators', 'Contributing', 'Editing with Google Docs', 'Document Your Event', 'Pages That Need Content', 'Branding', 'Social Events', 'Makers Hosting Making Events', 'Makers Going Into Community', 'General Event Topics', 'Going Virtual', 'Event Listings', and 'Issues that Will Come Up'. Each menu item has a small downward arrow indicating it's a dropdown. At the bottom of the screen, there's a large logo for 'Open Source Maker Event Playbook' featuring three stacked books with a play button icon on the right, followed by the text 'Open Source Maker Event Playbook' and 'A Playbook for'.

Event Technology

Summary: From tickets to scheduling to signage to communications, you're probably going to need a wide variety of technology for your event.

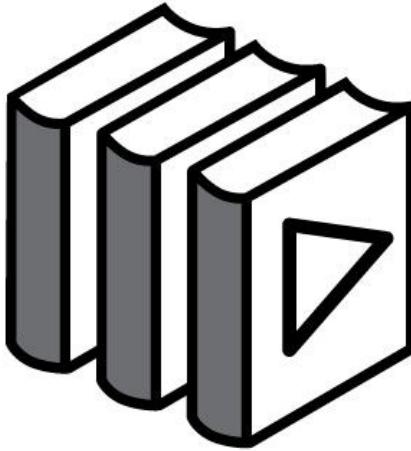

Table of Contents

Maker Faire Orlando

Maker Faire Orlando [🔗](#) is a multi-day Maker Faire taking place in Orlando, FL. In 2019, Maker Faire Orlando welcomed more than 16,000 participants and well over 300 exhibits. The event typically happens on a Saturday and Sunday, indoor and outdoor elements.

The Playbook for Maker Faire Orlando

This playbook is used document and organize the event so that we can provide an amazing experience for all our stakeholders including makers, volunteers, attendee, crew, sponsors. Over time, it will contain documentation for all the major areas of the Faire including our work with makers, volunteers, sponsors and others, hands-on activities, Robot Ruckus, Power Racing and more.

"We've had some amazing successes, and some spectacular failures in our 8 years of producing Maker Faire Orlando. This playbook captures the best and the worst so that we can learn, continue to improve, and continually grow our crew making the event more enjoyable for everyone involved." - Ian Cole, The Maker Effect Foundation

Current Status

We are part of the team launching the Maker Event Playbook at the Nation of Makers conference in June 2020. We've built this shell site to share the vision, and will be turning our attention to collecting

#² Technology and Tools

Is it possible to run a Maker Event using no technology? Maybe, but we don't want to try it! The good news is, tools have gotten easier to use, and cheaper, over the years. Chances are pretty good that Lead Producers will spend a good amount of time managing a large event by sitting in front of a laptop, or constantly on a phone or a radio. Much of the time spent with those tools is about communicating and keeping everything on schedule.

#² Ask for Help

If you're a Lead Producer and technology is just not your thing, that's okay... like other things, `_delegate_`. Find someone who just “gets” technology, or already has experience with what you'll be using. If you are using Eventbrite for ticketing, ask other event producers how they do it. Check out the Eventbrite Help Center and Eventbrite Support site. They are in the business of helping you make ticketing at your event smooth and painless, so lean on them as needed.

Event Technology

Summary: From tickets to scheduling to signage to communications, you're probably going to need a wide variety of technology for your event.

“Documentation Theme for Jekyll” + GitHub Pages

- GitHub Pages uses Jekyll, a static website generator to process the markdown files into html, and then adds the theme files, and our other code files to publish the website
- We leveraged the Open Source “Documentation Theme for Jekyll” that works with GitHub Pages as a jumpstart
 - The theme provides the site structure, navigation, search, and more
- Every time a change is made, GitHub Pages recreates and publishes the website
- GitHub Pages supports custom domains & ssl
- GitHub Pages is free!

Jen's Fork

Jen wants to submit changes to an overview page that explains how to recruit volunteers.

Changes are made & tested

Updates are committed

A pull request is created

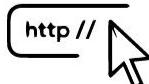

Maker Faire Miami's Fork

The Maker Faire Miami team will be creating their own version of the playbook for their event.

Changes are made & tested

Updates are committed

A localized version of the playbook is hosted with specific info for this event

Milwaukee Makerspace's Fork

The Milwaukee Makerspace team will be creating their own version of the playbook that covers the different events that happen within their makerspace.

Changes are made & tested

Updates are committed

A localized version of the playbook is hosted with specific info for this makerspace

GitHub “Repo”

A GitHub repository (repo) provides storage with version control for Open Source code (that's our playbook documentation pages), media and more. GitHub also tracks “issues” which are things to add or fix within our repo.

GitHub “Fork”

If you want to contribute to the Maker Event Playbook (or any GitHub Open Source project), you first create your own working copy of the repo. This is called “forking” the repo and your working copy is referred to as a “fork” of the original repo.

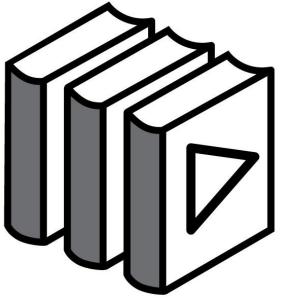

GitHub “Commit”

Once you've made a set of related changes to your repository (and tested them) you commit the change along with notes explaining the change. GitHub stores these commits in your repo and you can easily see the change history, or undo a commit later.

GitHub “Pull Request”

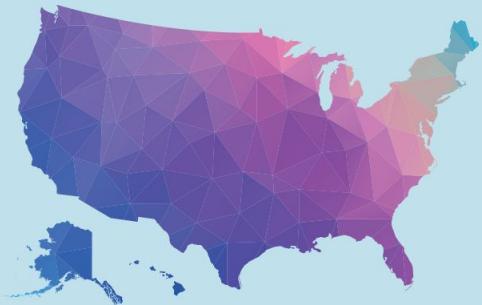

Once you've finished making changes in your fork, you can create a GitHub Pull Request. This is a request to the maintainers of the playbook, essentially saying “I've made an update, will you pull changes from my repo and merge them back into the original repository”

We Need You!

Ways You Can Get Involved

- Get connected
 - Email the team at makereventplaybook@nationofmakers.us to get onboarded! We are happy to get you started!
 - Join the #maker_event_playbook channel in the NOM Slack (and email us if you need to be invited to the Slack)
- Contribute to the Maker Event Playbook
 - Find an area to contribute
 - Review the [list of pages that need content](#), and find one where you can contribute!
 - Identify a type of maker event we didn't think of!
 - Read existing pages to find places where you have a relevant picture, or can add more detail
 - Use GitHub or Google Docs to create content - [see our guide for contributing](#)
- Drive awareness
 - Share the Playbook with others and ASK them to get involved to make a contribution. If you know they have experience with a certain type of maker event, ask them directly to contribute that to the playbook
- Create your own playbook for your makerspace, maker event, etc.
 - Email us to setup a session with your team to discuss how to get started. You'll need someone on your team comfortable with GitHub and GitHub Pages, but we can figure all that out on the call!

NOMCON

2020

Thank You!
